

# Transforming Recycling Through A.I. + Robotics

---

Presented by Jon Gertsmeier – National Sales Director

The U.S. recycling rate is around **34.5%**.

The U.S. throws away **\$11.4 billion** worth of recyclable containers and packaging every year.

# INDUSTRY CHALLENGES

Tough decisions between high operational and capital costs

Challenging material quality, resale value, and loss to landfill

Chronic labor shortages, injury risk, and high turnover

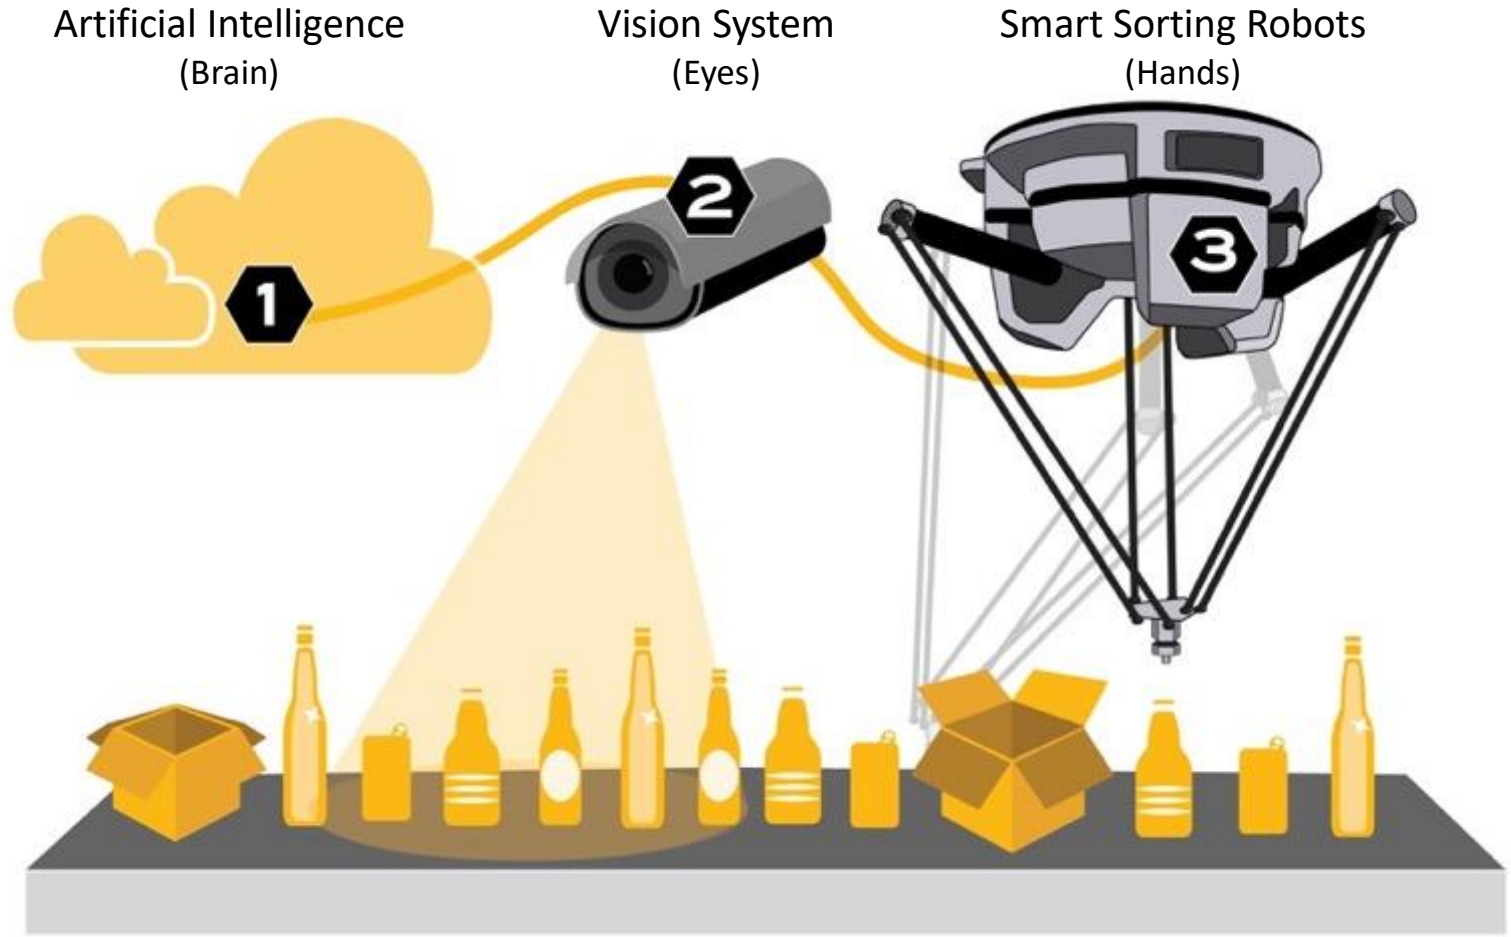

OUR MISSION:  
Transform the economics of recycling  
using A.I.+ Robotics

# AMP CORTEX™ HAS 3 COMPONENTS

# A.I. DRIVES THE PLATFORM

---

- Machine learning distinguishes features like a human
- Continuously learns as neural network expands
- Handles complex piled, non-singulated mixed waste

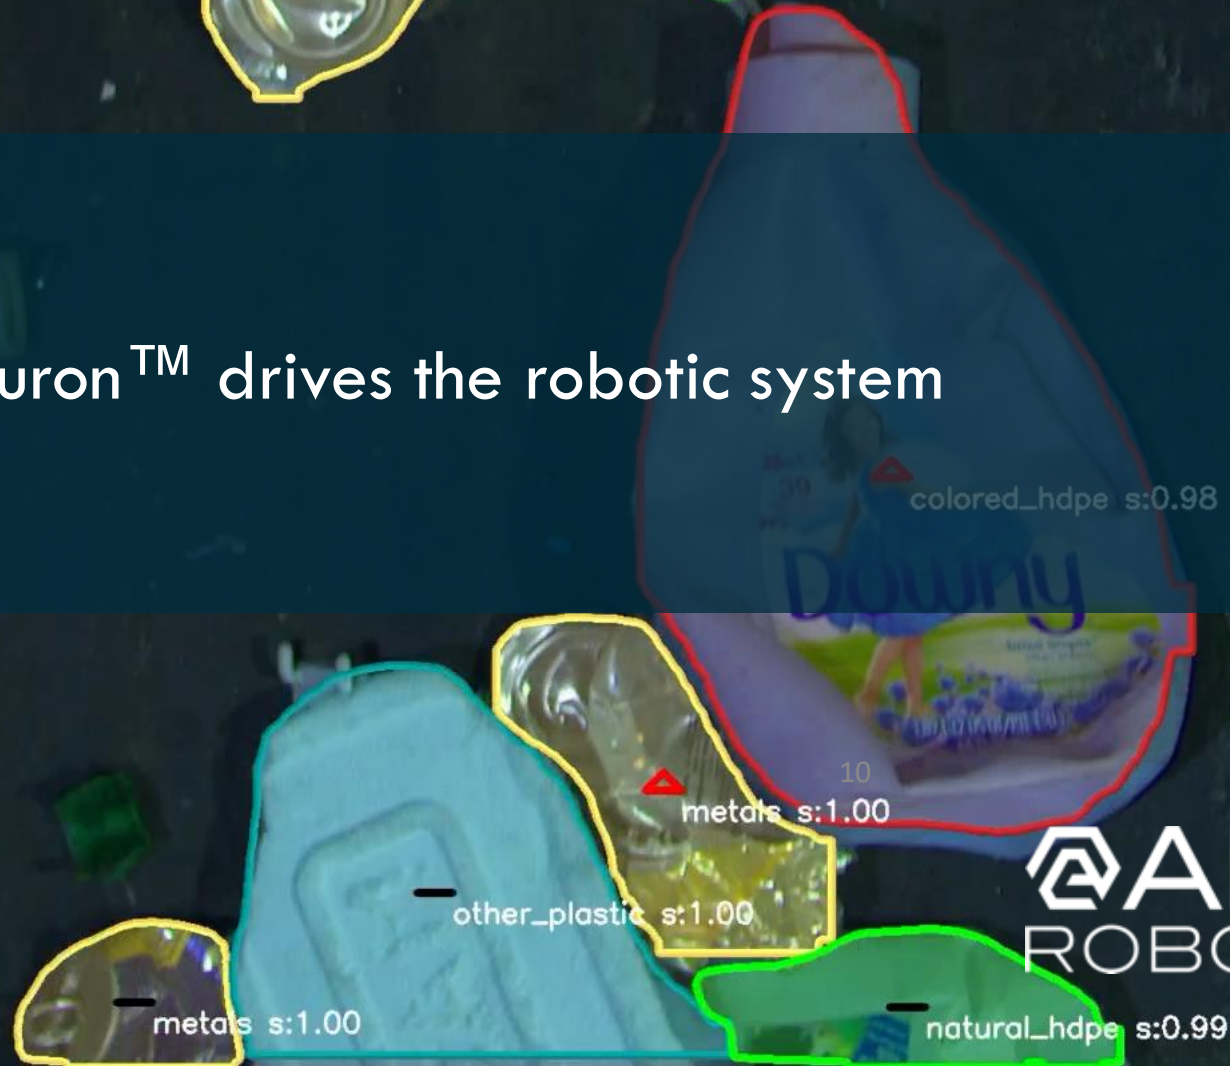

## VISION SYSTEM SEES THE MATERIAL STREAM

- Detects what to sort and pick
- Identifies unique material properties – color, texture, shape, size, etc.
- Can recognize down to the ‘brand’
- Captures all waste stream data for insights, measurement and optimization

AMP Neuron™ drives the robotic system

# MAXIMIZING NETWORKED INTELLIGENCE

THE POWER OF COLLECTIVE KNOWLEDGE

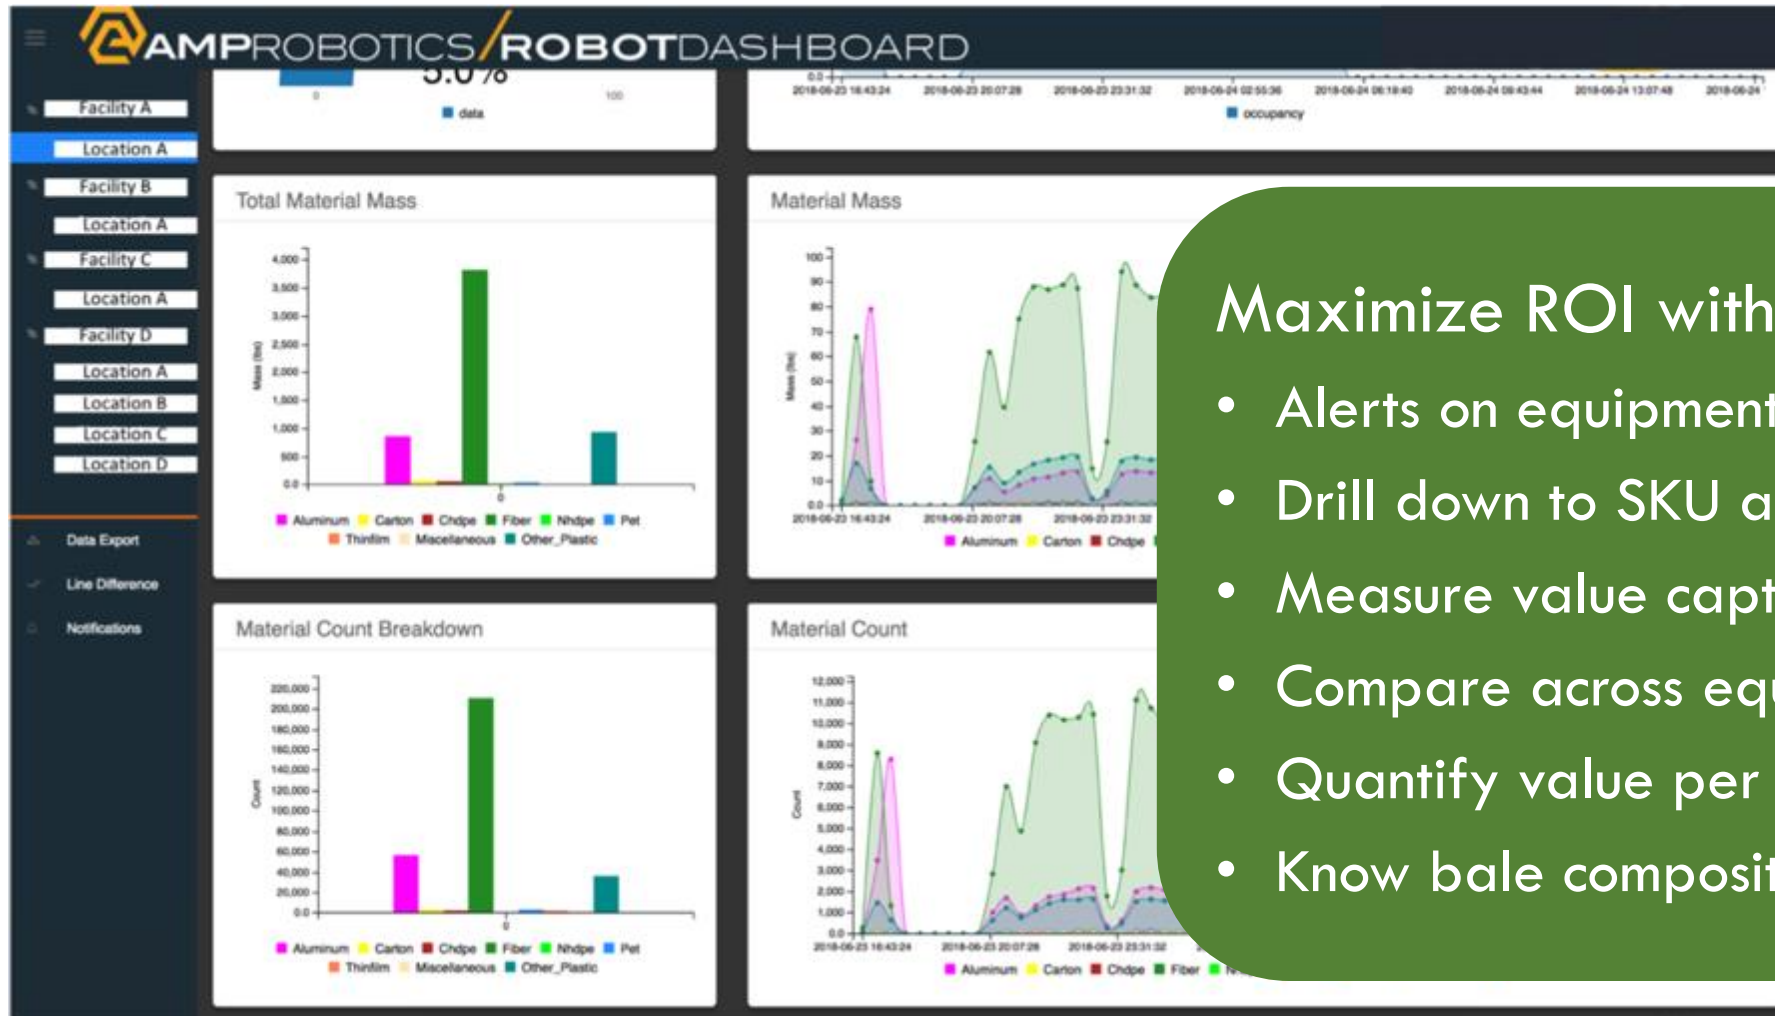

## ROBOTS EXECUTE WITH SPEED AND PRECISION

- High-speed picking twice as fast as humanly possible
- Sustainable, accurate, and consistent
- Precision prevents contamination
- Ideal for “dull, dirty, and dangerous”

# DIGITIZING THE WASTE STREAM

## Maximize ROI with Data

- Alerts on equipment issues/hazards
- Drill down to SKU and Brand-level
- Measure value captured and lost
- Compare across equipment
- Quantify value per haul
- Know bale composition

# DESIGNED FOR SCALE

---

- No retrofit
- Easy installation on existing lines
- Quickly installs over a weekend

## AMP Robotics Announces Largest Deployment of AI Guided Robots for the Recycling Industry

AMP's install of 14 robots at SSR in Florida is the largest application of AI-guided robots for recycling in the world.

ARTIFICIAL INTELLIGENCE

### Recycling Centers Roll Out AI-Trained Robots

Sorting plastics, glass and paper is one job people are unlikely to mind losing to AI

By John Murawski

July 5, 2019 5:30 am ET

Recycling facilities are deploying artificial-intelligence-guided robots, which can sort streams of waste more quickly and accurately than human workers.
